

VYLO PMS

PRIVATE • PRECISE • POWERFUL

Privacy Policy

v1.0.0 • 2026-09-04

1. Our Approach: Local-First by Design

Vylo PMS is built so that your financial data stays on your own computer. There is no cloud account, no sign-up, and no central server that stores your portfolio. This Policy explains what data the App handles, where it's stored, and the very limited cases where anything leaves your device.

2. Data You Provide

When you set up and use Vylo PMS, you may enter: your name and any household/family member names you choose to add as accounts on the installation; portfolio holdings and transaction history (stocks, mutual funds, ETFs, real estate, gold); financial planning inputs (goals, risk appetite, target allocation); and, if you use password recovery, your generated recovery codes.

All of this is written to a local database on your own device and is never transmitted to us or to any third party, except as described in Section 3.

3. The Only Data That Leaves Your Device

- Price lookups: to show current and historical prices, Vylo PMS sends an instrument's ticker symbol to Twelve Data and/or Yahoo Finance. No holdings data, portfolio value, or personal information is included in that request.
- Document parsing: if you upload a broker statement (rather than the App's own spreadsheet template) for import, the document is processed by an on-device document-parsing tool; extracted rows are staged locally for your review and confirmation before anything is saved.
- AI features: both AI-assisted features (classification suggestions, the financial-literacy assistant) run entirely on a locally-installed AI model (Llama 3.2 3B via Ollama) on your own machine. No prompt, question, or portfolio data is sent to any cloud AI service.

Nothing else about your portfolio leaves your device for any other feature.

4. What We Do Not Collect

Vylo PMS itself does not collect usage analytics, telemetry, or crash reports of any kind -- none is built into the App as of this release. (Separately, if the GitHub download page used to distribute the App ever adds visit/download analytics in the future, that would be disclosed on that page, not covered by this Policy, which is about the App itself.)

5. Data Storage & Security

Your data is stored in a local database on your device, protected by whatever disk-level security you have configured on that machine (e.g., Windows BitLocker) -- Vylo PMS relies on OS-level encryption rather than encrypting the database file itself.

There is currently no additional application-level encryption of the database at rest. If your device itself isn't encrypted or password-protected, your Vylo PMS data is only as protected as anything else on that device.

Local network traffic between the App's own components stays on your machine (localhost only) and is never exposed to your network or the internet.

6. Backup & Restore

Vylo PMS includes an Owner-triggered local backup/restore feature. Backups are saved to a location you choose on your own device or attached storage; we do not receive, store, or have access to your backups.

7. Data Retention & Deletion

Because all data lives locally, you control retention entirely: it persists for as long as you keep the App installed and the database file in place, and is fully in your control to delete. We hold none of your data, so there is nothing for us to retain or delete on our end.

8. Your Rights

Since Vylo PMS does not collect or hold your personal data on any server, most data-protection rights (access, correction, erasure, portability) are already fully in your hands locally, without needing to contact us. Questions: vyloproduct@gmail.com.

9. Children's Data

Vylo PMS is not directed at children and is not designed to knowingly collect data from anyone using it without appropriate parental/guardian awareness within a household setup. As a local, family-oriented tool, any "Family Member" accounts are expected to be set up by the Owner/parent/guardian of that installation.

10. Changes to This Policy

We may update this Policy as the App evolves; the version and date at the top show which version is in force.
